

# What to Deploy

Vue apps **run in the browser** – with browser-side JavaScript code

**HTML**  
(just one HTML file)

**CSS**  
(often no separate files)

**JavaScript**  
(built by Vue project setup)

A “**static**” web app / website

A static websites hosting provider is needed

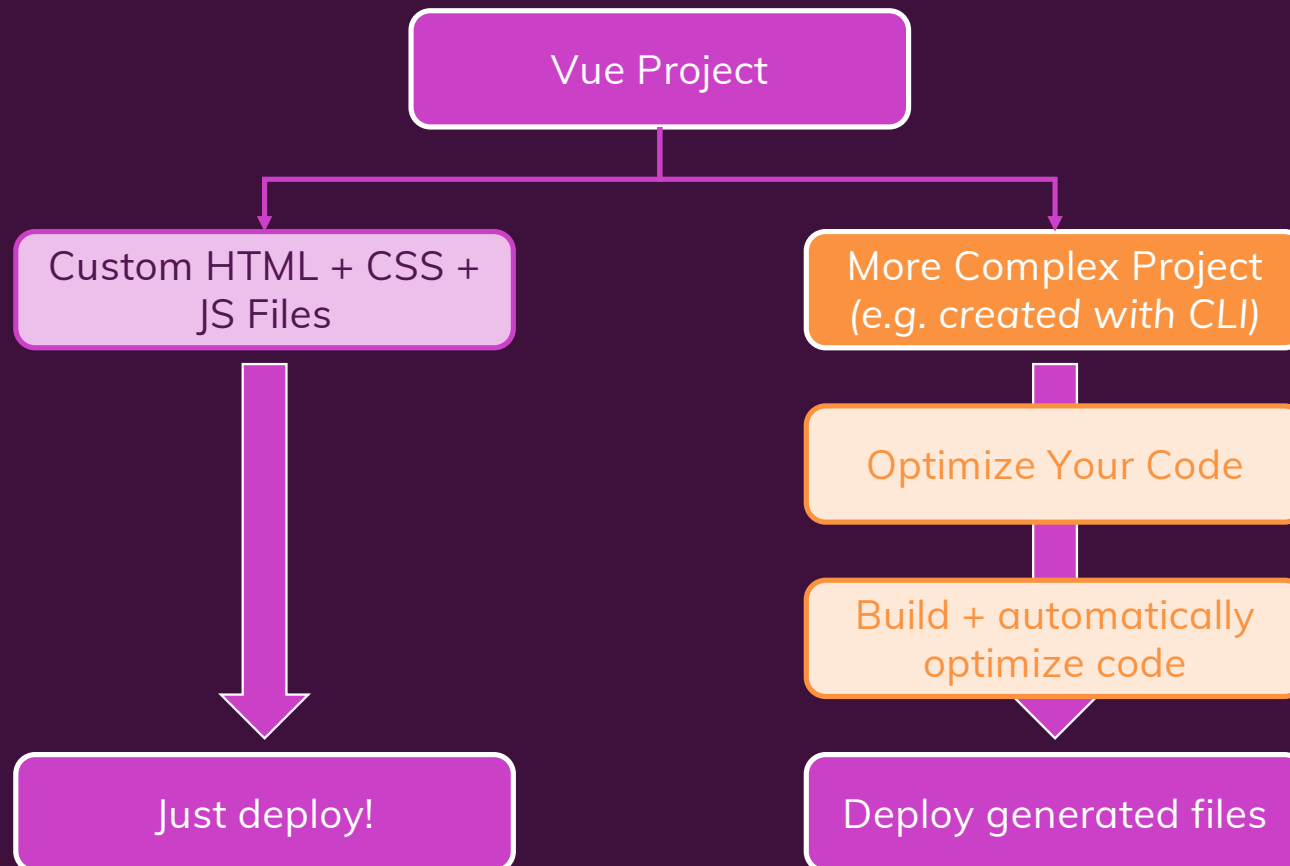

## Optimize Your Code

Test for Errors

Refactor & “Don’t  
repeat yourself”

Consider using  
“Asynchronous  
Components”

## Creating Deployable Resources

## SPAs & Routing
