

Vue 3 – What Changed?

Change

Vue instances/ apps are now created with **createApp()**

Change

“**data**” must now always be a **method**

Change

Components, directives & third-party modules are **registered on “app”** instead of Vue global object

Change

Transitions: v-enter is now **v-enter-from**

Change

Vue Router: Router is now created with **createRouter()**, transitions work differently

Change

Vuex: Store is now created with **createStore()**

Vue 3 – What's New?

New Feature

<teleport> Component

New Feature

Fragments

New Feature

Composition API **may** be used to replace Options API

New Feature (kind of)

Vue was internally re-written with TypeScript →
Better TypeScript support (optional!)

New Features & Changes

Change

Vue instances/ apps are now created in a slightly different way

Change

“data” must now always be a method

Change

Components, directives & third-party modules are registered on “app” instead of Vue global object

Change

Transitions: v-enter is now v-enter-from

Change
